

2.2 Technology Stack Breakdown

1. Platform Infrastructure & Application Scope

- **Base Platform:** ServiceNow (Scoped Application Container: `x_scms`)
- **Development IDE:** ServiceNow Studio
- **Core Table Inheritance:** Custom tables extending base platform functionality (`sys_user`, `task`) alongside custom application tables.

2. Automation & Scripting Logic

- **Workflow Automation:** Flow Designer for multi-stage approval routing, task assignments, and automated status updates.
- **Server-Side Scripting:** Business Rules, Script Includes (`SCMSUtils`), and Scheduled Script Executions.
- **Client-Side Scripting:** Client Scripts (`onLoad`, `onChange`, `onSubmit`), UI Policies, and Data Lookup Rules.

3. Service Catalog & End-User Interface

- **Presentation Layer:** Service Portal / Service Catalog.
- **Entry Points:** Custom Record Producers (for Leave Requests and Facility Complaints) and Catalog Items (for Course Registration).
