

Project Name: Smart Campus Management System (SCMS)

Application Scope: `x_scms_smart_campus`

1.1 Brainstorming Idea

Executive Summary

The **Smart Campus Management System (SCMS)** is a custom scoped ServiceNow application designed to digitize, centralize, and automate higher education campus operations. By replacing disconnected spreadsheets and physical paperwork with single-click self-service portals and Flow Designer automation, SCMS optimizes leave permissions, facility maintenance ticketing, and course enrollment management.

Key Capabilities Brainstormed

- **Unified Service Catalog:** Central portal for students to lodge hostel complaints, request IT assistance, and apply for academic leave.
- **Data Integrity Controls:** Server-side rules preventing duplicate course registrations and invalid leave date ranges.
- **Role-Based Security:** Isolated access levels matching campus personas (`x_scms.admin`, `x_scms.faculty`, `x_scms.student`, `x_scms.staff`).
- **Automated Approval Workflows:** Routing requests directly to Department Heads and Advisors via Flow Designer.
