

3. PROJECT DESIGN PHASE

Project Name: Smart Campus Management System (SCMS)

Application Scope: `x_scms_smart_campus`

3.1 Solution Fit

1. ServiceNow Platform Capabilities vs. Campus Operational Requirements

The **Smart Campus Management System (SCMS)** aligns campus administrative and academic demands with ServiceNow's core architecture capabilities:

- **Custom Scoped Application Structure (`x_scms`):** Keeps all campus data models, configurations, and scripts completely isolated from the standard global platform tables, ensuring upgradeability and preventing naming collisions.
- **Service Portal & Service Catalog:** Replaces fragmented paper forms with custom Record Producers and catalog items, giving students and faculty a modern, responsive portal interface.
- **Flow Designer & Approval Engines:** Replaces manual physical routing with multi-tier digital signatures and automated task assignments.
- **Role-Based Access Control (RBAC):** Guarantees data privacy through granular Access Control Lists (ACLs) tailored to Students, Faculty, Campus Support Staff, and Administrators.
