

5.1 Project Development & Testing Architectural Schematic

The schematic below illustrates the end-to-end testing, user acceptance verification (UAT), and quality assurance framework across unit scripts, automated workflows, catalog forms, and ACL security enforcement.

5.2 User Acceptance Report

1. Executive Summary & Acceptance Criteria

The User Acceptance Testing (UAT) phase validates that the **Smart Campus Management System (SCMS)** fulfills all functional, business operational, and security requirements defined in Phase 2.

- **Target Audience Evaluators:** Student Representatives, Department Heads (HODs), Faculty Advisors, and Campus Infrastructure Technicians.
- **Overall Acceptance Status: PASSED** (100% Core Requirements Satisfied).

2. UAT Execution Summary Table

Test Scenario ID	Persona / Tester	Feature Evaluated	Expected Outcome	Actual Result	Status
UAT-01	Student	Submit Leave Application via Portal	Portal validates dates (End >= Start); inserts record into x_scms_leave_request .	Dates validated successfully; record created in Requested state.	PASS
UAT-02	Faculty / HOD	Multi-Stage Approval Routing	Approval task generates in Agent Workspace / Portal for designated HOD.	Flow Designer routed task to HOD email and approval	PASS

				portal instantly.	
UAT-03	Student	Duplicate Course Enrollment Prevention	System blocks second registration attempt for an already enrolled course.	Business Rule triggered alert: <i>"Already enrolled in this course."</i>	PASS
UAT-04	Campus Staff	IT Support Ticket Auto-Assignment	Category = IT Hardware auto-assigns ticket to IT Support Techs group.	Auto-assignment rule routed complaint correctly to support queue.	PASS
UAT-05	Student	ACL Record Security Check	Student attempts to read/modify another student's leave request record.
